1. Preliminaries

Definition(Locally nilpotent derivation)

Let R be an integral domain containing a field k of characteristic zero .
A function $D : R \rightarrow R$ is said to be a locally nilpotent derivation (LND) if it satisfies the following properties:

P1 $D(r + s) = D(r) + D(s)$ for all $r, s \in R$

P2 $D(rs) = rD(s) + sD(r)$ for all $r, s \in R$

P3 for every $r \in R$ there exists $n \in \mathbb{N}$ such that $D^n(r) = 0$

1. Preliminaries

Definition(Degree function)

Let G be a totally ordered abelian group. A function $\mu : R \rightarrow G \cup \{-\infty\}$ is said to be a degree function on R if it satisfies the following properties:

- (a) $\mu(r) = -\infty$ if and only if $r = 0$.
- (b) $\mu(rs) = \mu(r) + \mu(s)$ for every $r, s \in R$
- (c) $\mu(r + s) \leq \max\{\mu(r), \mu(s)\}$ for every $r, s \in R$

1. Preliminaries

Every locally nilpotent derivation D on R defines a degree function.

$$\deg_D : R \rightarrow \mathbb{Z} \cup \{-\infty\}$$

for $r \neq 0$, $\deg_D(r) := \max\{n \in \mathbb{N} \cup \{0\} \mid D^n(r) \neq 0\}$

and $\deg_D(0) = -\infty$

- $\deg_D(r) = -\infty$ if and only if $r = 0$
- $\deg_D(rs) = \deg_D(r) + \deg_D(s)$
- $\deg_D(r + s) \leq \max\{\deg_D(r), \deg_D(s)\}$

1. Preliminaries

Definition (Irreducible LND)

$D \in \text{LND}(R)$ is said to be irreducible if (DR) is not contained in a proper principal ideal of R .

1. Preliminaries

Definition (Irreducible LND)

$D \in \text{LND}(R)$ is said to be irreducible if (DR) is not contained in a proper principal ideal of R .

Triangularizable LND

Let D be a locally nilpotent derivation on $k^{[n]}$. Then D is said to be triangularizable if there exist a system of variables X_1, \dots, X_n such that

$$D(X_i) \in k[X_1, \dots, X_{i-1}]$$

for $1 \leq i \leq n$

1. Preliminaries

Definition (Degree of a locally nilpotent derivation)

Let G be a totally ordered abelian group. $\mu : R \rightarrow G \cup \{-\infty\}$ be a degree function on R and $D \in LND(R)$. If maximum of the set $\{\mu(D(r)) - \mu(r) \mid r \in R, r \neq 0\}$ is in $G \cup \{-\infty\}$, then we define

$$\text{degree}_\mu(D) = \max\{\mu(D(r)) - \mu(r) \mid r \in R, r \neq 0\}$$

1. Preliminaries

Definition (Degree of a locally nilpotent derivation)

Let G be a totally ordered abelian group. $\mu : R \rightarrow G \cup \{-\infty\}$ be a degree function on R and $D \in LND(R)$. If maximum of the set $\{\mu(D(r)) - \mu(r) \mid r \in R, r \neq 0\}$ is in $G \cup \{-\infty\}$, then we define

$$\text{degree}_\mu(D) = \max\{\mu(D(r)) - \mu(r) \mid r \in R, r \neq 0\}$$

Definition (Homogeneous locally nilpotent derivation)

Let $R = \bigoplus_{n \in G} R_n$ be a G graded domain containing a field k . $D \in LND(R)$ is said to be homogeneous with respect to the G grading if and only if there exists $d \in G$ such that $DR_n \subset R_{n+d}$ for all $n \in G$.

1. Preliminaries

Now we define rank of a locally nilpotent R -derivation D on a polynomial ring $R^{[n]}$ over a domain R containing a field k .

1. Preliminaries

Now we define rank of a locally nilpotent R -derivation D on a polynomial ring $R^{[n]}$ over a domain R containing a field k .

Definition (Rank of an LND)

Let D be a locally nilpotent R -derivation on the polynomial ring $R^{[n]}$. Then we define rank of D by:

$$\min\{r \mid DV_1, \dots, DV_r \neq 0 \text{ and } DV_{r+1} = \dots = DV_n = 0$$

where V_1, V_2, \dots, V_n is a system of variables of $R^{[n]}$

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

In [2] (page-112) G. Freudenburg has asked the following question:

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

In [2] (page-112) G. Freudenburg has asked the following question:

Q. Does there exist a homogeneous locally nilpotent derivation on $k^{[n]}$ of degree 2 and rank n ?

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

In [2] (page-112) G. Freudenburg has asked the following question:

Q. Does there exist a homogeneous locally nilpotent derivation on k^n of degree 2 and rank n ?

We investigated the above question for $n = 3$.

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

- **(Miyanishi, Kambayashi):** For a field k of characteristic 0, if $D \in LND(k^{[3]})$, then $\ker(D) = k^{[2]}$.

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

- **(Miyanishi, Kambayashi):** For a field k of characteristic 0, if $D \in \text{LND}(k^{[3]})$, then $\ker(D) = k^{[2]}$.
- **(Zurkowski):** If D is a homogeneous LND on $k[X, Y, Z]$ with respect to a positive \mathbb{Z} -grading ω , then $\ker(D) = k[F, G]$ where F, G are homogeneous with respect to ω .

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

- **(Miyanishi, Kambayashi):** For a field k of characteristic 0, if $D \in LND(k^{[3]})$, then $\ker(D) = k^{[2]}$.
- **(Zurkowski):** If D is a homogeneous LND on $k[X, Y, Z]$ with respect to a positive \mathbb{Z} -grading ω , then $\ker(D) = k[F, G]$ where F, G are homogeneous with respect to ω .
- **(D. Daigle):** If $D \in LND(k^{[n]})$ and $\ker(D) = k[F_1, \dots, F_{n-1}]$, then $D = \alpha \Delta_{(F_1, \dots, F_{n-1})}$ for some $\alpha \in \ker(D)$.

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

- **(Miyanishi, Kambayashi):** For a field k of characteristic 0, if $D \in LND(k^{[3]})$, then $\ker(D) = k^{[2]}$.
- **(Zurkowski):** If D is a homogeneous LND on $k[X, Y, Z]$ with respect to a positive \mathbb{Z} -grading ω , then $\ker(D) = k[F, G]$ where F, G are homogeneous with respect to ω .
- **(D. Daigle):** If $D \in LND(k^{[n]})$ and $\ker(D) = k[F_1, \dots, F_{n-1}]$, then $D = \alpha \Delta_{(F_1, \dots, F_{n-1})}$ for some $\alpha \in \ker(D)$.
- A homogeneous locally nilpotent derivation $D = \alpha \Delta_{(F, G)}$ on $k^{[3]}$ is said to be of type (l, m, n) if $\deg(\alpha) = l$, $\deg(F) = m$ and $\deg(G) = n$.

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

Theorem 2.1

Let D be a homogeneous locally nilpotent derivation of $\text{rank}(D) > 1$ with respect to the standard grading $(1, 1, 1)$ on $k[X, Y, Z]$. Then there exist linear system of variables $\{L_1, L_2, L_3\}$ such that $\text{deg}_D(L_1) < \text{deg}_D(L_2) < \text{deg}_D(L_3)$

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

Theorem 2.1

Let D be a homogeneous locally nilpotent derivation of $\text{rank}(D) > 1$ with respect to the standard grading $(1, 1, 1)$ on $k[X, Y, Z]$. Then there exist linear system of variables $\{L_1, L_2, L_3\}$ such that $\text{deg}_D(L_1) < \text{deg}_D(L_2) < \text{deg}_D(L_3)$

- The above result generalizes for $R[X, Y, Z]$, where R is a PID.

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

Theorem 2.1

Let D be a homogeneous locally nilpotent derivation of $\text{rank}(D) > 1$ with respect to the standard grading $(1, 1, 1)$ on $k[X, Y, Z]$. Then there exist linear system of variables $\{L_1, L_2, L_3\}$ such that $\text{deg}_D(L_1) < \text{deg}_D(L_2) < \text{deg}_D(L_3)$

- The above result generalizes for $R[X, Y, Z]$, where R is a PID.
- But it is not true for every one dimensional normal domain.

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

Theorem 2.2

With respect to the standard grading $(1, 1, 1)$ on $k[X, Y, Z]$, there is no homogeneous locally nilpotent derivation of type $(0, 3, 3)$ and $(0, 2, d + 1)$ for $d = 1, 2, 3$.

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

Let D be a homogeneous LND of degree d on $k[X, Y, Z]$ with respect to the standard grading $(1, 1, 1)$ and $D = \alpha\Delta_{(F,G)}$ for some $\alpha \in k[F, G]$. Then

$$d = \deg(\alpha) + \deg(F) + \deg(G) - 3$$

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

Let D be a homogeneous LND of degree d on $k[X, Y, Z]$ with respect to the standard grading $(1, 1, 1)$ and $D = \alpha\Delta_{(F,G)}$ for some $\alpha \in k[F, G]$. Then

$$d = \deg(\alpha) + \deg(F) + \deg(G) - 3$$

- If $d = 0$, then either $\deg(F) = 1$ or $\deg(G) = 1$. So $\text{rank}(D) < 3$

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

Let D be a homogeneous LND of degree d on $k[X, Y, Z]$ with respect to the standard grading $(1, 1, 1)$ and $D = \alpha\Delta_{(F,G)}$ for some $\alpha \in k[F, G]$. Then

$$d = \deg(\alpha) + \deg(F) + \deg(G) - 3$$

- If $d = 0$, then either $\deg(F) = 1$ or $\deg(G) = 1$. So $\text{rank}(D) < 3$
- If $d = 1$ and $\text{rank}(D) = 3$, then D must be a homogeneous LND of type $(0, 2, 2)$.

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

Let D be a homogeneous LND of degree d on $k[X, Y, Z]$ with respect to the standard grading $(1, 1, 1)$ and $D = \alpha\Delta_{(F,G)}$ for some $\alpha \in k[F, G]$. Then

$$d = \deg(\alpha) + \deg(F) + \deg(G) - 3$$

- If $d = 0$, then either $\deg(F) = 1$ or $\deg(G) = 1$. So $\text{rank}(D) < 3$
- If $d = 1$ and $\text{rank}(D) = 3$, then D must be a homogeneous LND of type $(0, 2, 2)$.
- If $d = 2$ and $\text{rank}(D) = 3$, then D must be a homogeneous LND of type $(0, 2, 3)$.

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

Let D be a homogeneous LND of degree d on $k[X, Y, Z]$ with respect to the standard grading $(1, 1, 1)$ and $D = \alpha\Delta_{(F,G)}$ for some $\alpha \in k[F, G]$. Then

$$d = \deg(\alpha) + \deg(F) + \deg(G) - 3$$

- If $d = 0$, then either $\deg(F) = 1$ or $\deg(G) = 1$. So $\text{rank}(D) < 3$
- If $d = 1$ and $\text{rank}(D) = 3$, then D must be a homogeneous LND of type $(0, 2, 2)$.
- If $d = 2$ and $\text{rank}(D) = 3$, then D must be a homogeneous LND of type $(0, 2, 3)$.
- If $d = 3$ and $\text{rank}(D) = 3$, then D must be a homogeneous LND of type $(0, 2, 4)$ or $(0, 3, 3)$ or $(2, 2, 2)$.

2. Degrees of linear variables of $k[X, Y, Z]$ with respect to homogeneous LND and rank 3 derivations

Corollary 2.3

There is no homogeneous locally nilpotent derivation of rank 3 and degree ≤ 3 on $k[X, Y, Z]$ with respect to the standard grading $(1, 1, 1)$.

3. Homogeneous locally nilpotent derivation of rank 2 on $k[X, Y, Z]$

We investigated the structure of homogeneous locally nilpotent derivations of rank 2 on $k^{[3]}$ and characterised the triangularizable derivations among those.

3. Homogeneous locally nilpotent derivation of rank 2 on $k[X, Y, Z]$

Lemma 3.1

D be an irreducible homogeneous locally nilpotent derivation of rank 2 and degree d on $k[U, V, W]$ with respect to the standard grading. Then D is triangularizable if and only if there exists a system of variables $\{X, Y, Z\}$ linear in U, V, W such that $D = \Delta_{(X,P)}$ where

$$P = Y^{d+2} + Xf_{d+1}(X, Y) + \beta X^{d+1}Z$$

with $0 = \deg_D(X) < \deg_D(Y) < \deg_D(Z)$, $f_{d+1}(X, Y)$ is homogeneous polynomial of degree $d + 1$ and $\beta \in k^*$.

Moreover, $\deg_D(Y) = 1$ and $\deg_D(Z) = d + 2$.

3. Homogeneous locally nilpotent derivation of rank 2 on $k[X, Y, Z]$

Proposition 3.1

An irreducible homogeneous LND of rank 2 and degree $p - 2$ on $k[U, V, W]$ is triangularizable, where p is a prime.

3. Homogeneous locally nilpotent derivation of rank 2 on $k[X, Y, Z]$

Proposition 3.1

An irreducible homogeneous LND of rank 2 and degree $p - 2$ on $k[U, V, W]$ is triangularizable, where p is a prime.

It is clear from the Proposition 3.1 that the 2 is the smallest possible degree of an homogeneous LND of rank 2 which may not be triangularizable.

3. Homogeneous locally nilpotent derivation of rank 2 on $k[X, Y, Z]$

Theorem 3.1

Let D be an irreducible homogeneous locally nilpotent derivation of rank 2 and degree 2 with respect to the standard grading on $k[U, V, W]$ where k is algebraically closed. Then D is not triangularizable if and only if there exists a system of variable $\{X, Y, Z\}$ linear in U, V, W such that $D = \Delta_{(X,P)}$ where

$$P = (Y^2 + XZ)^2 + cX^3Y$$

for $c \in k^*$ with $0 = \deg_D(X) < \deg_D(Y) < \deg_D(Z)$.

Moreover, $\deg_D(Y) = 2$ and $\deg_D(Z) = 4$.

The Freeness Conjecture

Definition (Degree modules)

With respect to $D \in LND(R)$, the set $\mathcal{F}_n = \{r \in R \mid \deg_D(r) \leq n\}$ is said to be the n -th degree A -module, where $A = \ker(D)$.

The Freeness Conjecture

Definition (Degree modules)

With respect to $D \in LND(R)$, the set $\mathcal{F}_n = \{r \in R \mid \deg_D(r) \leq n\}$ is said to be the n -th degree A -module, where $A = \ker(D)$.

Definition (D- basis)

Let $D \in LND(R)$ and $A = \ker(D)$, a basis for a free A -submodule M of R is said to be a D -basis if every element of the basis has distinct \deg_D value.

The Freeness Conjecture

Definition (Degree modules)

With respect to $D \in LND(R)$, the set $\mathcal{F}_n = \{r \in R \mid \deg_D(r) \leq n\}$ is said to be the n -th degree A -module, where $A = \ker(D)$.

Definition (D- basis)

Let $D \in LND(R)$ and $A = \ker(D)$, a basis for a free A -submodule M of R is said to be a D -basis if every element of the basis has distinct \deg_D value.

In [3] G. Freudenburg has conjectured the following:

Let $B = k^{\llbracket 3 \rrbracket}$ and $D \in LND(B)$. If $A = \ker(D)$, then B is a free A -module with basis $\beta = \{b_i \mid i \in \mathbb{N} \cup \{0\}\}$ where $\deg_D(b_i) = i$.

4. Freeness of homogeneous triangularizable LND

Theorem 4.1

Let D be a triangularizable homogeneous locally nilpotent derivation on $B = k[U, V, W]$ and $A = \ker(D)$. Then B is free A -module with a D -basis.

4. Freeness of homogeneous triangularizable LND

Theorem 4.1

Let D be a triangularizable homogeneous locally nilpotent derivation on $B = k[U, V, W]$ and $A = \ker(D)$. Then B is free A -module with a D -basis.

The homogeneous non-triangularizable locally nilpotent derivation of rank 2 and degree 2 has the freeness property.

Freeness Property

- For $D \in LND(k^{[n]})$, where $n \geq 4$, the freeness property does not hold.

Freeness Property

- For $D \in LND(k^{[n]})$, where $n \geq 4$, the freeness property does not hold.
- The freeness property of any locally nilpotent derivation D is equivalent to the fact that

For every n , the degree module \mathcal{F}_n is a free A -module with a D -basis $\{b_i \mid 0 \leq i \leq n\}$.

Freeness Property

- For $D \in LND(k^{[n]})$, where $n \geq 4$, the freeness property does not hold.
- The freeness property of any locally nilpotent derivation D is equivalent to the fact that

For every n , the degree module \mathcal{F}_n is a free A - module with a D -basis $\{b_i \mid 0 \leq i \leq n\}$.

- D. Daigle has shown that every \mathcal{F}_n is free A - module of rank $n + 1$.

Freeness Property

- For $D \in LND(k^{[n]})$, where $n \geq 4$, the freeness property does not hold.
- The freeness property of any locally nilpotent derivation D is equivalent to the fact that

For every n , the degree module \mathcal{F}_n is a free A - module with a D -basis $\{b_i \mid 0 \leq i \leq n\}$.

- D. Daigle has shown that every \mathcal{F}_n is free A - module of rank $n + 1$.
- The existence of a D - basis is needed to be shown.

Example of a rank 3 R - derivation

Example

Let $B = R[X, Y, Z]$ where $R = \frac{\mathbb{R}[W_1, W_2]}{(W_1^2 + W_2^2 - 1)}$

w_1 and w_2 denote the residue classes of W_1 and W_2 in R respectively.

For $d \geq 0$ we define a homogeneous locally nilpotent R -derivation D of degree d on B as follows

$$DX = (1 - w_2)X_1^{d+1}$$

$$DY = -w_1X_1^{d+1}$$

$$DZ = (d + 2)w_1Y^{d+1}$$

where $X_1 = w_1X + (1 - w_2)Y \in R[X, Y, Z]$

Example of a rank 3 R - derivation

- $\ker(D) \neq R^{[2]}$

Example of a rank 3 R - derivation

- $\ker(D) \neq R^{[2]}$
- $\text{rank}(D) = 3$

Example of a rank 3 R - derivation

- $\ker(D) \neq R^{[2]}$
- $\text{rank}(D) = 3$
- $\text{deg}_D(X) = \text{deg}_D(Y) = 1$ and $\text{deg}_D(Z) = d + 2$

Example of a rank 3 R - derivation

- $\ker(D) \neq R^{[2]}$
- $\text{rank}(D) = 3$
- $\text{deg}_D(X) = \text{deg}_D(Y) = 1$ and $\text{deg}_D(Z) = d + 2$
- no linear system of variables $\{V_1, V_2, V_3\}$ such that

$$\text{deg}_D(V_1) < \text{deg}_D(V_2) < \text{deg}_D(V_3)$$
